

Date: March 12, 2015

To: Governance Committee (GC) of the Platte River Recovery Implementation Program (PRRIP)

From: Harry LaBonde           State of Wyoming's Representative to the GC  
  Director, Wyoming Water Development Office  
Patrick T. Tyrrell           Wyoming State Engineer  
Matthew Hoobler           State Coordinator, Wyoming Depletions Plan

**Re: Wyoming Depletions Report – Water Year 2014**

---

This document is provided pursuant to the PRRIP, *Attachment 5, Section 7, and Paragraph II.B.* of Wyoming's Depletions Plan, approved by the GC on October 24, 2006 and revised on April 10, 2007, December 12, 2007, and August 11, 2009. This report summarizes any new depletion that commenced during Water Year 2014 (October 1, 2013 to September 30, 2014).

Baseline No. 1

The State of Wyoming (Wyoming) complied with the Modified North Platte Decree intentionally irrigated acreage limitations for the 2014 irrigation season. On February 12, 2015, the Wyoming State Engineer's Office (SEO) submitted the intentionally irrigated acreage and reservoir storage accruals compliance report to the North Platte Decree Committee (NPDC).

Baseline No. 2

The SEO collected all the pertinent water use information to compare Water Year 2014 (WY 2014) water uses to the benchmarks under the existing Baseline No. 2 in Wyoming's Depletions Plan. As of WY 2014, Wyoming's total water uses are less than Baseline No. 2. The underruns, translated to the state line, are 58,499.6 acre-feet for the irrigation season and 5,027.6 acre-feet for the non-irrigation season.

Baseline No. 3

The development of post-1997 storage in the South Platte River basin is 60.89 acre-feet.

*Attachments 1 and 2* contain the detailed WY 2014 water use data and the reporting of new depletions.

**Attachment 1**  
**Wyoming Depletions Report – Water Year 2014**

**1. Existing Water Related Activities – Baseline No. 1**

1.1. Compliance with the Modified North Platte Decree

Wyoming complied with the Modified Decree as per the intentionally irrigated acreage report submitted to the NPDC on February 12, 2015. The intentionally irrigated acreage was 205,479 acres for the sub-basin above Guernsey Reservoir. Irrigation water use in the Benchmark No. 1 sub-basins appears in *Attachment 2 – Table 2.1*.

1.2. Kendrick Project

The Kendrick Project did not exceed the acreage limitation of 24,249 acres. A letter requesting verification of this total was sent to the Wyoming Area Office of the Bureau of Reclamation (BOR) on February 4, 2015, and a verbal response was provided on March 9, 2015. Lyle Myler of the BOR indicated that the Casper-Alcova Irrigation District irrigated 24,249 for WY 2014. Written verification may be available at a later date.

1.3. Mitigation

No mitigation is required.

**2. Existing Water Related Activities – Baseline No. 2**

2.1. Annual Water Use versus Benchmarks

Irrigation water use in the Benchmark No. 2 sub-basins appears in *Attachment 2 – Table 2.2*. Since Horse Creek sub-basin irrigation has no affect on depletions at the State Line during the irrigation season, irrigated acres in this sub-basin were not counted in WY 2014.

*Attachment 2 – Table 2.4* compares the WY 2014 water use with the benchmarks. The irrigation, municipal, industrial, rural domestic, retired/mitigation uses, and post-1997 new water uses are included in each respective row.

The sources of the rural domestic population data is the State of Wyoming Department of Administration and Information and the U.S. Census Bureau 2010 Census. The rural domestic use and municipal population totals are based on the adjusted 2010 Census for 2013, which is the latest data available.

*Attachment 2 – Table 2.4 Column 5* includes water right abandonments derived from searching the Wyoming Board of Control records for permanently retired irrigation water uses between 2005–2008. In the Pathfinder to Guernsey sub-basin, the records were searched back to 1998.

**Attachment 1**  
**Wyoming Depletions Report – Water Year 2014**

Additionally in *Table 2.4 Column 5*, the non-irrigation season overruns from municipalities and industries above Guernsey Dam have been offset by the agriculture underruns tabulated from Guernsey Dam to the state line. Due to the intervening reservoirs on the North Platte River, the effects of the depletions resulting from the basins above Guernsey Dam in both the irrigation and non-irrigation seasons arrive at the Guernsey to State Line reach during the irrigation season. Therefore, any municipal and industrial overruns above Guernsey Dam can be offset by agriculture underruns in the Guernsey Dam to State Line portion of the North Platte River basin (*Wyoming Depletions Plan – Attachment No. 1, page 4, October 24, 2006*).

**2.2. Mitigation**

After the overruns and underruns are translated to the state line, the net effect is an underrun for both the irrigation season and the non-irrigation season. No mitigation is required.

**3. South Platte River Basin – Baseline No. 3**

For WY 2014, there was an increase in acre-feet of storage in the South Platte Basin in Wyoming. The 1997 to 2013 total was 59.92 acre-feet, and with an increase of 0.97 acre-feet in storage, the reported storage total for WY 2014 is 60.89 acre-feet. All of these facilities are small ponds for stock, wildlife, fish propagation or environmental purposes. The cumulative effect of these facilities does not affect flows at the Wyoming / Colorado state line during a large runoff event.

**4. Proposed Changes to Benchmarks**

At this point in time, Wyoming has no plans to propose changes to the benchmarks.

**5. New Water Related Activities**

5.1. In *Attachment 2 – Table 2.3*, Wyoming reports by sub-basin the new water related activities commencing during WY 2014 that are covered by existing water related Baseline No. 2 in Wyoming's Depletions Plan. *Table 2.3* also includes the total number of new water related activities implemented since 1997. This post-1997 total is integrated into Column 6 of *Table 2.4* and contributes to the overruns / underruns that occur.

**6. Non-hydrologically Connected Groundwater Wells**

During WY 2014, there were no new groundwater well applications submitted to the SEO which requires the approval of the Groundwater Wells Subcommittee (GWSC) of the NPDC.

**Attachment 2**
