

Attachment 1
Wyoming Depletions Report – Water Year 2018

1. Existing Water Related Activities – Baseline No. 1

1.1. Compliance with the Modified North Platte Decree

Wyoming complied with the Modified Decree as per the intentionally irrigated acreage report submitted to the NPDC on January 15, 2019. The intentionally irrigated acreage was 178,890 acres for the sub-basin above Guernsey Reservoir. Irrigation water use in the Benchmark No. 1 sub-basins appears in *Attachment 2 – Table 2.1*.

1.2. Kendrick Project

The Kendrick Project did not exceed the acreage limitation of 24,249 acres. A phone call requesting verification of this total was made on January 29, 2019 to the Wyoming Area Office of the Bureau of Reclamation (BOR) and verification that 24,249 acres were irrigated was received from the BOR on January 29, 2019.

1.3. Mitigation

No mitigation is required.

2. Existing Water Related Activities – Baseline No. 2

2.1. Annual Water Use versus Benchmarks

Irrigation water use in the Benchmark No. 2 sub-basins appears in *Attachment 2 – Table 2.2*. Since Horse Creek sub-basin irrigation has no affect on depletions at the State Line during the irrigation season, irrigated acres in this sub-basin were not counted in WY 2018.

Attachment 2 – Table 2.4 compares the WY 2018 water use with the benchmarks. The irrigation, municipal, industrial, rural domestic, retired/mitigation uses, and post-1997 new water uses are included in each respective row.

The sources of the rural domestic and municipal population data is the State of Wyoming Department of Administration and Information and the U.S. Census Bureau 2017 Report.

Attachment 2 – Table 2.4 Column 5 includes water right abandonments derived from searching the Wyoming Board of Control records for permanently retired irrigation water uses between 2005–2008. In the Pathfinder to Guernsey sub-basin, the records were searched back to 1998. These numbers are updated as new abandonments occur.

Additionally in *Table 2.4 Column 5*, the non-irrigation season overruns from municipalities and industries above Guernsey Dam have been offset by the agriculture underruns tabulated from Guernsey Dam to the state line. Due to the intervening

Attachment 1
Wyoming Depletions Report – Water Year 2018

reservoirs on the North Platte River, the effects of the depletions resulting from the basins above Guernsey Dam in both the irrigation and non-irrigation seasons arrive at the Guernsey to State Line reach during the irrigation season. Therefore, any municipal and industrial overruns above Guernsey Dam can be offset by agriculture underruns in the Guernsey Dam to State Line portion of the North Platte River basin (*Wyoming Depletions Plan – Attachment No. 1, page 4, October 24, 2006*).

2.2. Mitigation

After the overruns and underruns are translated to the state line, the net effect is an underrun for both the irrigation season and the non-irrigation season. No mitigation is required.

3. South Platte River Basin – Baseline No. 3

For WY 2018, there was an increase in acre-feet of storage in the South Platte Basin in Wyoming. The 1997 to 2017 total was 90.02 acre-feet, and with an increase of 89.30 acre-feet in storage, the reported storage total for WY 2018 is 179.32 acre-feet. Most of these facilities are small reservoirs for stock, wildlife, fish propagation or environmental purposes. Two of these facilities combined for 66.36 acre-feet in capacity, but both existed prior to 1997. The cumulative effect of these facilities does not affect flows at the Wyoming / Colorado state line during a large runoff event.

4. Proposed Changes to Benchmarks

At this point in time, Wyoming has no plans to propose changes to the benchmarks.

5. New Water Related Activities

5.1. In *Attachment 2 – Table 2.3*, Wyoming reports by sub-basin the new water related activities commencing during WY 2018 that are covered by existing water related Baseline No. 2 in Wyoming’s Depletions Plan. *Table 2.3* also includes the total number of new water related activities implemented since 1997. This post-1997 total is integrated into Column 6 of *Table 2.4* and contributes to the overruns / underruns that occur.

6. Non-hydrologically Connected Groundwater Wells

During WY 2018, there were no new groundwater well applications submitted to the SEO which requires the approval of the Groundwater Wells Subcommittee (GWSC) of the NPDC.

Attachment 2
Wyoming Depletions Report – Water Year 2018

Table 2.1
Exiting Water Related Baseline No. 1

Decree Category	Benchmark Acreage	2018	Difference Acreage
Irrigated Acreage - Ab. Gu.	226,000	178,890	47,110
Irrigated Acreage - Kendrick	24,249	24,249	0

Table 2.2
Existing Water Related Baseline No. 2 – Irrigation Water Use

Sub-basin	Acreage Benchmark	2018	Overruns (Underruns)	Unit C.U.	Overruns (Underruns)
	(acres)	(acres)	(acres)	(af/acre)	(acre-feet)
Guernsey-State Line	106,221	84,658	-21,563	1.32	-28,463.16
Horse Creek	41,179	*		1.16	
Upper Laramie	91,255	83,162	-8,093	0.79	-6,393.47
Lower Laramie	85,711	34,558	-51,153	1.31	-67,010.43
Total	324,366	202,378	-80,809		-101,867.06

* Since Horse Ck. sub-basin depletions have no affect on depletions at the State Line during the irrigation season irrigated acres were not counted in WY 2018.
